SUMMARY

Software developer with ~2 years of experience building data-driven enterprise systems in C#, .NET, SQL, and Python. Comfortable working across the stack, from database design to API integrations, and skilled at turning business requirements into reliable solutions. Detail-oriented, quick to learn, and focused on building systems people can depend on.

EXPERIENCE

Application Developer, K-Rise Systems (Aurora, IL) *January 2025 – Present*

Enterprise software company

- **Worked on the rebuild of the company's AP Automation application** for JD Edwards (primary project) in C# and .NET, adding new AI features and updates across the invoice pipeline, from scanned capture through validation and into JDE vouchers
- **Help implement AP Automation for clients**, gathering requirements from their finance teams, customizing the solution to fit their workflows, and carrying improvements back into the base product
- **Wrote SQL to insert and update JD Edwards tables** as invoices flowed through the pipeline, keeping accounts payable data accurate and in sync between systems
- **Built AP Automation reports and dashboards**, writing the SQL queries and building the report pages in JavaScript and CSS to give clients visibility into automation performance and their invoice data
- **Integrated AI APIs** to match addresses extracted from scanned invoices against address records in the database, reducing manual lookup
- **Supported development of EASYPay and EASYCommerce**, the company's .NET payments and e-commerce applications, including SQL to keep payment and order data in sync with JD Edwards

AI Evaluator (Contract), Outlier, a Scale AI platform (Remote) *May 2024 – January 2025*

- **Evaluated and compared AI-generated code** for correctness, clarity, and quality, writing feedback used as training data to improve large language models
- **Applied detailed scoring rubrics consistently** to coding tasks, flagging bugs and logical errors

Software Engineering Intern – Middleware, Chamberlain Group (Chicago, IL) *May 2022 – January 2023*

- **Built RESTful API endpoints in .NET 6** for the myQ connected-device platform
- **Helped migrate services from .NET Core 3.1 to .NET 6**, improving performance and maintainability in an Agile/Scrum team

PROJECTS

Switch To YouTube | Open-source | https://github.com/amkashyap1220/SwitchToYoutube *August 2023 – Present*

- **Built a free, open-source tool** that uses the Spotify and YouTube Music APIs to transfer users' playlists between platforms, as an alternative to paid migration services

ATG Shop | Databases course (CSCI 466) *August 2023 – December 2023*

- **Designed a normalized relational schema in MySQL** for inventory, orders, and customers, and wrote the SQL behind order tracking and inventory management
- **Built the full web application on the LAMP stack** for store owners and customers

EDUCATION

Bachelor of Science in Computer Science, Northern Illinois University, May 2024

- Relevant coursework: Databases, Probability & Statistics, Data Structures, Algorithms, Software Engineering
- Scholarship player, NIU Esports
- Event Coordinator / Board Member, Association for Computing Machinery (ACM)
- Transfer Merit Scholar

SKILLS & CERTIFICATIONS

Languages: SQL, Python, C#, JavaScript/TypeScript, C++
Databases: Microsoft SQL Server (T-SQL, SSMS), MySQL, NoSQL
Frameworks & Tools: .NET / .NET Core, REST APIs, Git, Jira
Cloud: AWS, Azure
Enterprise Systems: JD Edwards (ERP)
Certifications: AWS Certified Cloud Practitioner (May 2024)
